
Robert David Sanders

Revised February 17, 2014

After graduating MIT with a degree in Electrical Engineering I received a Ford Foundation Fellowship to the University of Pennsylvania where I graduated with a Masters in Electrical Engineering in 1965.

I entered the workforce at Sylvania's Applied Research Laboratory as a specialist in digital systems. After several years there I joined Infoton which was a spinoff from the lab. I was the team leader in developing a computer terminal that would sell for under \$1000.00 (Amazing - today you can get a whole laptop for considerably less). During the recession of the 70's Infoton was on its last legs and I decided to join our family business Legow Management Company.

Legow Management specializes in investing and managing rental properties. I successfully computerized the operation in the early 80's and our portfolio has quadrupled from about 1000 apartments to about 4000 apartments. We are still a family business and have successfully brought in the next generation so that there will be a continuing core to carry the business forward for another generation.

I am happily married to Sara-Ann for 47 years and live in Livingston, NJ. We have two wonderful daughters Wendy and Toby (both MIT grads) and 3 super grandchildren-- Andrew, Sophie and Tamir.

We are still active in MIT. As a family Sara and I have been participating in funding major art installations all over the campus and Sara-Ann is on the Council For The Arts.
